

PLEASE READ AND SIGN

Upon payment for installation, your taps will be installed within approximately fifteen (15) to thirty (30) working days (work load weather permitting).

In order to reduce installation cost, the District only includes the cost for backfill of pipeline only. **It does not include** complete cleanup, return trips for ditch line settling, adding tank extensions or restoration of pavement, gravel, concrete, sod, tank extensions flowerbeds, etc. If complete ditch line restoration is required, add \$100.00 to above price. Any other restoration of paving, concrete, sod, tank extensions, etc., must be billed on a time and material basis.

To further reduce cost, the District obtains costs for installation of water and sewer service at the same time. If you will require water service before you have installed the electrical for the non-clog pump, sewer installation cost will be an additional \$60.00.

The customer is responsible to provide the District with an adequate location where the water meter and sewer service is wanted. If at all possible, service will be installed at this location. Any relocation will be at the expense of the customer.

Please provide a number where you can be contacted for installation coordination. Failure to provide a telephone number will result in a delay in installation.

On October 21, 1998, the Board of Directors amended our customer service policy to state the following:

In regards to new installations, an administrative fee of \$25.00 for residential and \$50.00 for commercial accounts will be charged to any person or persons requesting cancellation of the installation after the cost has been paid.

The District will start charging for water and/or sewer service from the date that the taps are set. Rates are available upon request.

I hereby acknowledge that I have read the above and agree to these terms.
